Orivet UK Life Plan

The Orivet UK Life Plan is suitable for most cats. It will help you to discover specific health related risks and traits buried in your cat's DNA. Understanding your cat's health risks and ancestry can help you and your vet to create a truly personalised and effective training, wellness, nutrition and medical program for your cat.

The Orivet Life Plan allows you to:

- Uncover potential health risks based on your cat's breed, age, gender, and weight
- Rank potential health risks based on likelihood and severity
- Identify tendencies towards adverse reactions to certain drugs
- Develop a personalised health and wellness plan
- Enhance your relationship with your vet and other pet care providers

Orivet UK Cat DNA Health Screen and Life Plan

The Orivet UK feline DNA Health Screen and Life Plan is suitable for most common breeds of cat including the DSH and DLH. It will help you to discover specific health related risks and traits buried in your cat's DNA. Understanding your cat's health risks and ancestry will help you and your vet to create a truly personalised and effective wellness, nutrition and medical program for your cat.

The greater your knowledge of your cat's genetic makeup and health risks, the more pro-active you can be about planning future health care. Cats, just like people, inherit genetic variations associated with disease, along with physical and personality traits from their parent and ancestors. They also transfer breed-specific genetic disorders from generation to generation.

The Orivet Cat DNA Health Screen and Life Plan allows you to:

- Screen your cat's DNA for dozens of genetic diseases and traits
- Uncover potential health risks based on your cat's breed, age, gender and weight
- Rank potential health risks based on likelihood and severity
- Determine your cat's blood group
- Develop a personalised health and wellness plan
- Enhance your relationship with your vet and other pet care providers

DNA Health Screens and Life Plans

- Sampling is quick, easy and pain free; the process is non-invasive and should take less than 5 minutes. A cheek swab is all that is required
- Remember to fill in your cat's on-line questionnaire (you will be sent a link)
- Results are available for you to access in approximately 3 weeks
- Individual tests for many heritable diseases and traits are available on request

Customise your cat's health care from your armchair!

Terms and conditions

On sample receipt your cat's DNA is analysed to determine the presence of genetic variations associated with certain diseases and traits with a reasonable degree of certainty. Our procedures are designed to provide reliable and accurate results. No responsibility is accepted for any errors incurred whilst taking the swab sample or for any injuries or loss that may occur as a result.

The purpose of the Cat health Screen is to identify specific variations in your pet's DNA associated with an increased risk for the corresponding disease and traits. The test is not designed to diagnose disease and test result must not be relied upon as an official diagnosis – this can only be made in conjunction with examination and appropriate verification by your veterinary surgeon.

The Orivet UK test is based upon the evidence-based database of documented diseases in scientific publications.

In the unlikely event that it is not possible to determine your pet's breed history or genetic status for any of the variations tested, or that an error in the analysis occurs, liability by Orivet UK, related companies or individuals is disclaimed and damages in any event are limited to the payment received by Orivet UK for the specified analysis at issue.
