Orivet UK Dog DNA Health Screen and Life Plan

The Orivet UK canine DNA Health Screen and Life Plan is designed for pure breeds and dogs of known breed makeup. It will help you to discover specific health related risks and traits buried in your dog's DNA. Understanding your dog's health risks and ancestry will help you and your vet to create a truly personalised and effective training, wellness, nutrition and medical program for your dog.

The greater your knowledge of your dog's genetic makeup and health risks, the more pro-active you can be about planning future health care. Dogs, just like people, inherit genetic variations associated with disease, along with physical and personality traits from their parent and ancestors. They also transfer breed-specific genetic disorders from generation to generation.

The Orivet Dog DNA Health Screen and Life Plan allows you to:

- Screen your dog's DNA for dozens of genetic diseases and traits
- Uncover potential health risks based on your dog's breed, age, gender and weight
- Rank potential health risks based on likelihood and severity
- Identify tendencies towards adverse reactions to certain drugs
- Predict adult weight for dogs less than one year of age
- Develop a personalised health and wellness plan
- Enhance your relationship with your vet and other pet care providers

Orivet UK Dog Breed Identification, DNA Health Screen and Life Plan

The Orivet UK breed identification, DNA Health Screen and Life Plan is designed for dogs of mixed breed. It will help you to discover specific health related risks and traits buried in your dog's DNA. DNA Health Screens, Breed Identification and Life Plans

- Sampling is quick, easy and pain free; the process is non-invasive and should take less than 5 minutes. A cheek swab is all that is required
- Remember to fill in your dog's on-line questionnaire (you will be sent a link)
- Results are available for you to access in approximately 3 weeks

Customise your dog's health care from your armchair!

Terms and conditions

On sample receipt, your dog's DNA is analysed to determine the breeds present in its ancestry and/or the presence of genetic variations associated with certain diseases and traits with a reasonable degree of certainty. Our procedures are designed to provide reliable and accurate results. No responsibility is accepted for any errors incurred whilst taking the swab sample or for any injuries or loss that may occur as a result.

The purpose of the Breed Identification DNA test is to identify the genetic makeup of a mixed breed dog. The test is not designed to validate the purity of a purebred dog and test results must not be relied upon as official certification of your dog's genetic makeup relating to the laws regarding restricted breeds.

The purpose of the Dog Health Screen is to identify specific variations in your pet's DNA associated with an increased risk for the corresponding disease and traits. The test is not designed to diagnose disease and test result must not be relied upon as an official diagnosis – this can only be made in conjunction with examination and appropriate verification by your veterinary surgeon.

The Orivet UK test is based upon the evidence-based database of documented diseases in scientific publications.

In the unlikely event that it is not possible to determine your pet's breed history or genetic status for any of the variations tested, or that an error in the analysis occurs, liability by Orivet UK, related companies or individuals is disclaimed and damages in any event are limited to the payment received by Orivet UK for the specified analysis at issue.
